UN 1133

Specific Target Organ Toxicity - Single Exposure (Respiratory Tract Irritation) Cat 3, Specific Target Organ Toxicity - Single Exposure (Narcotic Effects) Cat 3

- Ground and bond container and receiving equipment.
- Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment.
- Keep cool
- Keep locked up.
- Avoid strong bases.
- Avoid reaction with oxidising agents

**Completion guide and action sign-off**

Completed Safety Data Sheets are held for all products and the information, health risks and the directive to use protective equipment have been conveyed to employees and recorded in the Safety Training and Competency Register

**For hazardous substance compliance information call EPA on 0800 225 537.**

## **Hazardous Substances Information**

We will ensure that hazardous substances that are stored or handled on site are clearly labelled, have an SDS (Substances Data Sheet) from suppliers for each product and will record these in the company Hazardous Substances Register.

Hazardous Substances may cause long term effects and significant risks to Workers if not stored and handled correctly. We will ensure all Workers who may be exposed to any hazardous substance during any work activity are provided with appropriate personal protective equipment, information and training on the nature of the hazard and the means of reducing or controlling any exposure to the hazardous substance.

Full Detailed list of all Camex Hazardous Substances can be found online through Dropbox or alternatively Camex is utilising the Hazardous Substances Calculator Tool provided by WorkSafe <https://www.hazardoussubstances.govt.nz/calculator#C9A61C>

Under HSNO legislation, certain substances and/or volume quantities must be under the control of an 'Approved Handler'. We will ensure trained Approved Handlers will be on site if required.

Some flammable or oxidising substances at on our workplace may also require a Location Test Certificate. We will ensure trained Location Test Certificates are achieved and current if required.

All hazardous substances and containers must be disposed in accordance with legislation or the manufacturer's instructions or technical support documents.

Other hazardous substances such as Asbestos containing materials (ACM), Contaminated Substances and/or Soils may be found in our area of works.

If any of these materials are found work will stop and the area cordoned off until an approved plan is in place.

In the case of ACM or contaminated ground an independent assessor will be called into site to test the substance and a report made.

If the substance is tested positive all materials will be removed from site to an approved dump site. In the case or ACM this will either be under supervision or by an approved removal specialist.

More information is available through the Environmental Protection Authority at <http://www.epa.govt.nz> and Codes of Practice are available from Worksafe at [www.worksafe.govt.nz](http://www.worksafe.govt.nz)
